Annotate Image Features with Live Video Overlay

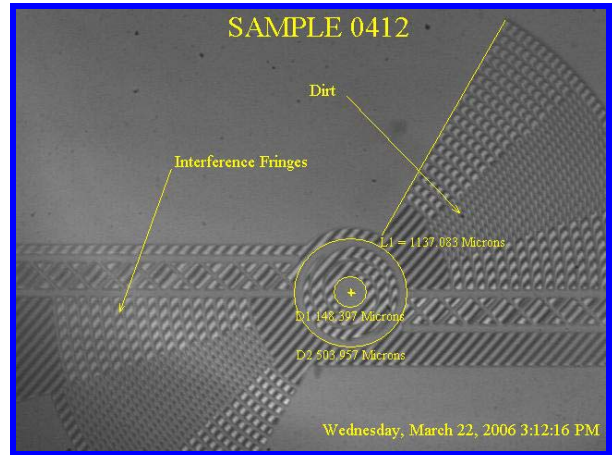

Overlay of graphic and text information is a powerful feature that lets a user annotate items of interest in the image. Visual Inspector provides you the ability to overlay lines, circles, boxes, arrows, text, and horizontal and vertical scales. These graphic objects can be positioned and moved around on the image. Objects, no longer needed, can be deleted. All overlay objects that are created for an image may be saved with it.

- Export slide shows to Power Point presentations.
- Export measurement results to either ASCII files or Excel spreadsheets.
- Export annotated images to disk for use in other programs.
- Integrated ability to print images on the system printer.
